PROFESSIONAL SUMMARY

Hi, I'm Alfred, a Curious and self-motivated Computer Science (Cyber Security) graduate with a strong interest in new technologies and how systems work. I approach technical challenges with patience, analytical thinking, and a determination to find effective solutions. My background spans full-stack development, mobile application development, and cybersecurity, providing me with a versatile technical foundation. I value continuous learning and professional growth, and I am motivated by opportunities to explore new technologies, solve real-world challenges, and contribute to meaningful improvements across different areas of technology.

TECHNICAL SKILLS

- Languages: Python, Java, JavaScript, TypeScript, C++, PHP, SQL, HTML, CSS
- Frontend: React, Next.js, Vite, Tailwind CSS, Bootstrap, Flutter
- Backend: Node.js, Express.js, REST APIs, WebSockets, Strapi, MySQL, PostgreSQL, MongoDB, Redis, DynamoDB
- Security: Zero Trust Architecture, Authentication & Authorization, Access Control (RBAC), MFA, Input Validation, Secure Coding, VAPT, Threat Modeling, Risk Management, OWASP Top 10, Incident Response, Security Monitoring, Wireshark, Suricata, Wazuh
- Cloud & Infrastructure: AWS (EC2, S3, ALB, Auto Scaling Groups, DynamoDB, IAM, Multi-AZ Deployments)
- Delivery & Infrastructure: Git, GitHub Actions, Docker, Linux, PM2, SEO, Server Operations

PROFESSIONAL EXPERIENCE

Freelance Full-Stack Developer: Current

Freelance/ Client Projects

- DWMLight/ Aria: developed the multilingual product-oriented website for a China-based client reaching international audiences.
- Check In & Salary Calculation System (Unreleased): developed a Python-based system that integrates QR code employee check-ins with automated attendance tracking and salary calculations, reducing manual payroll processing and improving operational efficiency.

Full Stack Developer: July 2025 – November 2025

TBro's Ventures Sdn Bhd

- Maintained and optimized existing company systems by identifying, troubleshooting, and resolving software bugs to ensure system stability and reliability.
- Designed and established core application architecture, reusable components, and system integrations to improve scalability, maintainability, and support future development.
- Developed and implemented an automated e-Invoicing feature to streamline data entry, reduce manual input, and improve operational efficiency.

Mobile App Developer: April 2024 – June 2024

Alva Production

- Developed and enhanced mobile application features using Flutter and Dart, including search functionality, UI components, animations, and navigation improvements.
- Debugged and resolved application issues involving navigation, search functionality, and data handling to improve application stability.
- Collaborated with the development team to implement new features, maintain existing applications, and document code changes.

SELECTED PROJECTS

DWMLIGHT/ ANVA CMS (Aria): Client Project

TypeScript • React • Next.js • Express.js • MongoDB • PM2

- Designed and developed responsive user interfaces and reusable frontend components, integrating backend APIs to support dynamic website functionality.
- Contributed to backend development, system integration, testing, and debugging to improve application functionality and reliability.
- Implemented SEO enhancements and supported application deployment, server configuration, and ongoing server operations.

QR Code-Based Attendance & Payroll Management System: Client Project (Unreleased)

Python • QR Code Integration • Attendance Tracking • Payroll Automation

- Developed a Python-based system integrating QR code employee check-ins with automated attendance tracking and salary calculations.
- Implemented attendance-based payroll processing to streamline employee time tracking, minimize manual data entry, and improve administrative efficiency.

AI-Assisted Zero Trust Network Access (ZTNA) Security Framework: Final Year Project

Python • AI Integration • OWASP • CWE • Security Automation

- Developed an AI-assisted security framework to identify vulnerabilities and mitigate unauthorized access in cloud-based enterprise web applications.
- Implemented Zero Trust security controls, including MFA, RBAC, IP-based access restrictions, rate limiting, and session protection.
- Designed an automated security workflow for vulnerability scanning, AI-assisted remediation planning, control implementation, and post-remediation verification.

EDUCATION

Bachelor of Science (Honours) in Computer Science: Expected April 2027

Asia Pacific University | Specialism in Cyber Security

CGPA: 3.21 | Final Result Received

Diploma in Information Technology: Graduated 2024

Asia Pacific University | Specialism in Software Engineering

CGPA: 3.01
